

# What is **Contact Tracing**?

Contact Tracing is a tool public health workers use to stop the spread of a disease. **Here's how it works:**

**1**  
When someone tests positive for COVID-19, the health department is notified

**2**  
We call the person who tested positive for COVID-19 to see who else might have been exposed

**3**  
Once we know who else might have been exposed, we contact those people

**4**  
Public Health Workers will help them quarantine for:  
**14** days if around people that are high-risk for the virus (**recommended**)  
**10** days if you **have NO symptoms**  
**7** days if you have a negative COVID-19 test on or after Day 5 and **have NO symptoms**

If you get a call from your Local Health Department about COVID-19, take it seriously.

What we ask for:

- ✓ Where you've been for the last few days
- ✓ The names and contact information of people you've had close contact with so we can call them
- ✓ We will NOT tell them who potentially exposed them

What we **DON'T** ask for:

- ✗ Social Security number
- ✗ Banking information
- ✗ Immigration status
