Communal transmission level: Substantial transmission

Population received at least 1 dose: 1,300,503 people (29.1% of total pop.)

Population fully vaccinated: 681,481 people (15.3% of total pop.)

Beginning with the March 19, 2021 report, the County and Metro Alerts have been replaced with Community Transmission by County and Metro Area. This is in alignment with the Centers for Disease Control and Prevention's Indicators and Thresholds for Community Transmission of COVID-19.

The purpose of this report is to develop a shared understanding of the current status of the pandemic at the national, regional, state, and local levels. We recognize that data at the state level may differ from that available at the federal level. Our objective is to use consistent data sources and methods that allow for comparisons to be made across localities. We appreciate your continued support in identifying data discrepancies and improving data completeness and sharing across systems. We look forward to your feedback. All inquiries and requests for information should be directed to COVID-Data-RFI@hhs.gov.

* Indicates absolute change in percentage points.
** Due to delayed reporting, this figure may underestimate total diagnostic tests and week-on-week changes in diagnostic tests.
† 90% of facilities reported during the most current week.

**DATA SOURCES:**

- **Note:** Some dates may have incomplete data due to delays in reporting. Data may be backfilled over time, resulting in week-to-week changes.
- **Cases and Deaths:** State values are aggregated data provided by the states to the CDC. Historical reports of cases and deaths exceeding 1% of the total new cases or deaths reported in the US that day have been excluded. Data is through 3/25/2021; previous week is from 3/12 to 3/18. Kentucky state-level data does not include a historical backlog of deaths reported across multiple days: 417 on 3/18, 166 on 3/19, 25 on 3/24, and 88 on 3/25.
- **Testing:** CELR (COVID-19 Electronic Lab Reporting) state health department-reported data. Test positivity through 3/23/2021; previous week is from 3/10 to 3/16. Test volume through 3/19/2021; previous week is from 3/6 to 3/12.
- **SNFs:** Skilled nursing facilities. National Healthcare Safety Network. Data is through 3/21/2021, previous week is from 3/8 to 3/14.
- **Admissions:** Unified Hospitals Dataset in HHS Protect. Data is through 3/24, previous week is from 3/11 to 3/17.
- **Shortages:** Unified Hospitals Dataset in HHS Protect. Values presented show the latest reports from hospitals in the week ending 3/24/2021 for staffing and the week ending 3/24/2021 for supplies.
- **Vaccinations:** CDC COVID Data Tracker. Data includes the Moderna, Pfizer BioNTech, and J&J/Janssen COVID-19 vaccines and reflects current data available as of 12:21 EDT on 03/26/2021. Data last updated 06:00 EDT on 03/26/2021. Persons who are fully vaccinated include those who have received both doses of the Moderna or Pfizer-BioNTech vaccine as well as those who have received one dose of the J&J/Janssen vaccine. Allocations are made pro rata (equal based on population) from which jurisdictions are then to order. Currently, few persons under age 18 are being vaccinated; this group represents ~22% of the US population and the percentage varies by jurisdiction.

**METHODS:** Details available on last page of report.

DATA SOURCES
Maps and figures reflect 7-day average of data from 3/19-3/25 (cases), 3/17-3/23 (tests). Metro areas and counties are listed in order of the total number of cases in the last week from largest to smallest.

Note: Most recent days may have incomplete reporting.
Cases: County-level data is from a CDC managed aggregate county dataset compiled from state and local health departments; therefore, the values may not match those reported directly by the state. Data is through 3/25/2021.
Combined Transmission Level: If the two indicators suggest different transmission levels, the higher level is selected. Previous week transmission levels are computed based on current data. See CDC COVID Data Tracker.
METHODS: Details available on last page of report.
Top 12 counties based on number of new cases in the last 3 weeks

The scale is fixed per row based on the historical peak number of daily cases*

* The vertical scale of plots is fixed per row based on the historical peak number of daily cases; use caution when comparing visuals across different rows.

DATA SOURCES
Cases: County-level data is from a CDC managed aggregate county dataset compiled from state and local health departments; therefore, the values may not match those reported directly by the state. Data is through 3/25/2021. Last 3 weeks is from 3/5 to 3/25. Counties are listed in order of the number of cases in the last three weeks, from largest to smallest.

METHODS: Details available on last page of report.

NEW CASES PER 100,000 IN THE WEEK:

ONE MONTH BEFORE

Date: 3/19/2021

New Cases per 100K
03/01/2021-03/07/2021

TWO MONTHS BEFORE

Date: 2/22/2021

New Cases per 100K
01/10/2021-01/28/2021

THREE MONTHS BEFORE

Date: 1/25/2021

New Cases per 100K
12/25/2020-01/28/2021

DATA SOURCES
Starting March 26, 2021, the national rankings have been reorganized to show the rate of cases, test positivity, rate of admissions per 100 beds, and rate of deaths from lowest to highest.

Note: Some dates may have incomplete data due to delays in reporting. Data may be backfilled over time, resulting in week- to- week changes.

Cases: County-level data is from a CDC managed aggregate county dataset compiled from state and local health departments; therefore, the values may not match those reported directly by the state. State values are aggregated data provided by the states to the CDC. The week one month before is from 2/19 to 2/25; the week two months before is from 1/22 to 1/28; the week three months before is from 12/25 to 12/31. Two states have reported historical backlog of cases: Alabama reported 4,007 cases on 3/15 and Texas reported 1,775 cases on 3/22 through 3/24. These are shown at the county level but are not included in state totals. Effective 3/17/2021 Oklahoma will only be updating county cases once per week, on Wednesdays.

METHODS: Details available on last page of report.

VIRAL (RT-PCR) LAB TEST POSITIVITY IN THE WEEK:

ONE MONTH BEFORE

TWO MONTHS BEFORE

THREE MONTHS BEFORE

DATA SOURCES
Starting March 26, 2021, the national rankings have been reorganized to show the rate of cases, test positivity, rate of admissions per 100 beds, and rate of deaths from lowest to highest.

Note: Some dates may have incomplete data due to delays in reporting. Data may be backfilled over time, resulting in week-to-week changes.

Testing: Combination of CELR (COVID-19 Electronic Lab Reporting) state health department-reported data and HHS Protect laboratory data (provided directly to Federal Government from public health labs, hospital labs, and commercial labs) through 3/23/2021. The week one month before is from 2/17 to 2/23; the week two months before is from 1/20 to 1/26; the week three months before is from 12/23 to 12/29. There are discrepancies between federal and state data on South Carolina’s percent positivity. These differences are being investigated.

NEW DEATHS PER 100,000 IN THE WEEK:

ONE MONTH BEFORE

TWO MONTHS BEFORE

THREE MONTHS BEFORE

DATA SOURCES
Starting March 26, 2021, the national rankings have been reorganized to show the rate of cases, test positivity, rate of admissions per 100 beds, and rate of deaths from lowest to highest.

Note: Some dates may have incomplete data due to delays in reporting. Data may be backfilled overtime, resulting in week-to-week changes.

Deaths: County-level data is from a CDC managed aggregate county dataset compiled from state and local health departments; therefore, the values may not match those reported directly by the state. State values are aggregated data provided by the states to the CDC. The week one month before is from 2/19 to 2/25; the week two months before is from 1/22 to 1/28; the week three months before is from 12/25 to 12/31. Four states have reported historical backlogs of deaths: Kentucky reported 696 deaths across 3/18, 3/19, 3/24, and 3/25; Michigan reported 107 deaths across 3/13, 3/18, 3/23, and 3/25; North Carolina reported 68 deaths on 3/25; and West Virginia reported 165 deaths on 3/12. These are shown at the county level but are not included in state totals. Effective 3/17/2021 Oklahoma will only be updating county deaths once per week, on Wednesdays. Kansas corrected previously reported deaths at the state level on 3/12, resulting in a decrease in the total deaths. As such, week-on-week changes are not reflective of true values.

METHODS: Details available on last page of report.

DATA SOURCES
Maps and figures reflect 7-day average of data from 3/19-3/25 (cases), 3/17-3/23 (tests).
Note: Most recent days may have incomplete reporting.
Cases: County-level data is from a CDC managed aggregate county dataset compiled from state and local health departments; therefore, the values may not match those reported directly by the state. Data is through 3/25/2021. Two states have reported historical backlogs of cases: Alabama reported 4,077 cases on 3/15 and Texas reported 1,775 cases on 3/22 through 3/24. These are shown at the county level but are not included in state totals. Effective 3/17/2021 Oklahoma will only be updating county cases once per week, on Wednesdays.
Testing: Combination of CELR (COVID-19 Electronic Lab Reporting) state health department-reported data and HHS Protect laboratory data (provided directly to Federal Government from public health labs, hospital labs, and commercial labs). Data is through 3/23/2021. There are discrepancies between federal and state data on South Carolina’s percent positivity. These differences are being investigated.
County Percentages: Based on a denominator of 3,220 county/county-equivalents, including states, the District of Columbia, and Puerto Rico municipios.
Combined Transmission Level: if the two indicators suggest different transmission levels, the higher level is selected. Previous week transmission levels are computed based on current data. See "COVID-19 Data Tracker".
METHODS: Details available on last page of report.

### Summary

- Some states may have incomplete data due to delays and/or differences in state reporting. Data may be backfilled over time, resulting in week-to-week changes. It is critical that states provide as much up-to-date data as possible. Figures and values may also differ from state reports due to differing methodologies.
- Color threshold values are rounded before color classification.
- **Cases and Deaths:** County-level data is from a CDC-managed aggregate county dataset compiled from state and local health departments; therefore, the values may not match those reported directly by the state. State values are aggregated data provided by the states to the CDC. Data is as of 13:33 EDT on 03/26/2021. Two states have reported historical backlogs of cases: Alabama reported 4,007 cases on 3/15 and Texas reported 1,775 cases on 3/22 through 3/24. These are shown at the county level but are not included in state totals. Effective 3/17/2021 Oklahoma will only be updating county deaths once per week, on Wednesdays. Four states have reported historical backlogs of deaths: Kentucky reported 606 deaths across 3/18, 3/19, 3/24, and 3/25; Michigan reported 107 deaths across 3/13, 3/18, 3/23, and 3/25; North Carolina reported 68 deaths on 3/25; and West Virginia reported 165 deaths on 3/12. These are shown at the county level but are not included in state totals. Effective 3/17/2021 Oklahoma will only be updating county deaths once per week, on Wednesdays. Kansas corrected previously reported deaths at the state level on 3/23, resulting in a decrease in the total deaths. As such, week-on-week changes are not reflective of true values.
- **Testing:** The described testing represent viral COVID-19 laboratory diagnostic and screening test (reverse transcription polymerase chain reaction, RT-PCR) results—not individual people—and exclude antibody tests and tests, unless stated otherwise. CELR (COVID-19 Electronic Lab Reporting) state health department-reported data are used to describe county-level viral COVID-19 RT-PCR result totals when information is available on patients’ county of residence or healthcare providers’ practice location. HHS Protect laboratory data (provided directly to Federal Government from public health labs, hospital labs, and commercial labs) are used otherwise. Because the data are deidentified, total RT-PCR tests are the number of tests performed, not the number of individuals tested. RT-PCR test positivity rate is the number of positive tests divided by the number of tests performed and resulted. For test positivity, last week data are from 3/17 to 3/22, previous week data are from 3/10 to 3/16, the week one month before data are from 3/6 to 3/12. HHS Protect data is recent as of 13:12 EDT on 03/26/2021. Testing data are inclusive of every testing and processed by the CELR system as of 19:00 EDT on 03/25/2021. There are discrepancies between federal and state data on South Carolina’s percent positivity. These differences are being investigated.
- **Hospitalizations:** Unified Hospitals Dataset in HHS Protect. These data exclude psychiatric, rehabilitation, and religious non-medical hospitals. In addition, hospitals explicitly identified by states/regions as those from which we should not expect reports were excluded from the percent reporting figure. The data presented represents raw data provided; we are working diligently with state liaisons to improve reporting consistency. Data is recent as of 10:13 EDT on 03/26/2021.
- **Hospital PPE:** Unified Hospitals Dataset in HHS Protect. This figure may differ from state data due to differences in hospital lists and reporting between federal and state systems. These data exclude psychiatric, rehabilitation, and religious non-medical hospitals. Hospitals explicitly identified by states/regions as those from which we should not expect reports were excluded from the percent reporting figure. Data is current as of N/A.
- **Skilled Nursing Facilities:** National Healthcare Safety Network (NHSN). Data report resident and staff cases independently. Quality checks are performed on data submitted to the NHSN. Data that fail these quality checks or appear inconsistent with surveillance protocols may be excluded from analyses. Data presented in this report are more recent than data publicly posted by CMS. Last week is 3/15-3/21, previous week is 3/8-3/14.
- **State, County, and Metro Area Community Transmission Levels**
- **High Transmission:** Those states, CBSAs, and counties that during the last week reported 100 or more cases per 100,000 population or a lab test positivity at or above 10.0%.
- **Substantial Transmission:** Those states, CBSAs, and counties that during the last week reported from 50 to 99 cases per 100,000 population or a lab test positivity from 8.0% to 9.9%.
- **Moderate Transmission:** Those states, CBSAs, and counties that during the last week reported from 10 to 49 cases per 100,000 population or a lab test positivity from 5.0% to 7.9%.
- **Low Transmission:** Those states CBSAs and counties that during the last week reported from 0 to 9 cases per 100,000 population or a lab test positivity from 0.0% to 4.9%.
- **Change in hospital staffing shortages:** Border states are considered if the two indicators suggest different transmission levels, the higher level is selected. Previous week transmission levels are computed based on current data. See CDC COVID Data Tracker.
- **Shortages:** Unified Hospitals Dataset in HHS Protect. These data exclude psychiatric, rehabilitation, and religious non-medical hospitals. Includes hospitals currently reporting a staffing shortage. Short supply is defined as a hospital reporting they are not able to maintain a 3-day supply of N95s, face masks, gloves, gowns, or eye protection. Data is recent as of N/A.
- **Vaccinations:** CDC COVID Data Tracker. Includes the Moderna, Pfizer BioNTech, and J&J/Janssen COVID-19 vaccines and reflects current data available as of 12:21 EDT on 03/26/2021. Data last updated 06:00 EDT on 03/26/2021. Persons who are fully vaccinated include those who have received both doses of the Moderna or Pfizer-BioNTech vaccine as well as those who have received one dose of the J&J/Janssen vaccine. Allocations are made pro rata (equal based on population) from which jurisdictions are then to order. Because COVID-19 vaccines available in the U.S. are authorized only for persons ≥16 years of age (Pfizer-BioNTech) or ≥18 years of age (Moderna and J&J/Janssen), currently few persons under age 18 are being vaccinated; this group represents ~22% of the U.S. population and the percentage varies by jurisdiction.
